The present invention relates to a method of stimulation the immune system. The method involves administration of an immunostimulatory peptides are jobypeptide from Parapoxvirus. Two immunostimulatory peptides are identified in the present invention and designated BSWL and PP30. Also disclosed are the polymucleotide sequences encoding them. The BSWL polymucleotide induces dendritic cell accumulation when expressed in skin, and the PP30 polymucleotide exhibite adjuvant activity in the absence of stimulating dendritic cell accumulation at the site of incculation. When co-incculated, both genes acts as adjuvants in stimulating an immune response. The sequences of the invention are useful for stimulation of an immune system in a subject, preferably mammal, especially human or mouse. The method enhances immune response induced by gene vaccines. The present sequence represents Parapoxvirus BSWL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immune system stimulation; immunostimulatory polypeptide; Parapoxvirus; BZWL; PP30; dendritic cell accumulation; skin; adjuvant activity; immune response; gene vaccine; immunostimulant.
                                                                                                                                                                                                                                                                                                                                Stimulation of an immune system involves use of an immunostimulatory polypeptide from parapox virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel composition for enhancing an immune response to an antigen comprising administering to a subject mammal a B2L viral envelope protein of a Parapox virus and an antigen, and detecting a resultant enhanced, specific immune response to the antigen. The B2L protein is unassociated with other envelope components naturally associated with the B2L protein in the virus, and acts as adjuvant to enhance the immune response to the antigen. The invention also discloses a pharmaceutical composition for enhancing an immune response to an antigen, the composition preferably comprises the PP30 protein of a natigen, the nucleic acid encoding the protein and the antigen or the nucleic acid encoding the protein of the invention may have virucide, cytostatic, tuberculostatic, virucide or anti-HIV cativity and may be used as a vaccine. The protein is PP30 protein of a parapox virus. The method of the invention is useful for enhancing an immune response to an antigen for treating or preventing tumour, flu, the protein is anthrax or HIV infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Enhancing an immune response to an antigen by administering to a subject mammal a B2L viral envelope protein of a Parapox virus and an antigen and detecting a resultant enhanced, specific immune response to the antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immune system stimulation; immunostimulatory polypeptide; Parapoxvirus; B2WL; PP30; dendritic cell accumulation; skin; adjuvant activity; immune response; gene vaccine; immunostimulant.

system. The method involves administration of an immunostimulatory polypeptide from Parapoxvirus. Two immunostimulatory peptides are identified in the present invention and designated B2ML and PP30. Also disclosed are the polymucleotide sequences encoding them. The B2ML polymucleotide equences encoding them. The B2ML polymucleotide exhibits adjuvant activity in the absence of stimulating dendritic cell accumulation when expressed in absence of stimulating dendritic cell accumulation at the site of incoulation. When co-inoculated, both genes acts as adjuvants in stimulating an immune response. The sequences of the invention are useful for stimulating on immune system in a subject, preferably mammal, especially human or mouse. The method enhances immune response induced by gene vaccines. The present sequence represents Parapoxvirus B2ML
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tumour antigen; flu; tuberculosis; respiratory syncytial virus; anthrax; HIV; immunostimulant; virucide; anti-HIV; D1701.
                                                                                                                         Stimulation of an immune system involves use of an immunostimulatory polypeptide from parapox virus.
                                                                                                                                                                                                                                                                                       The present invention relates to a method of stimulation the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B2L viral envelope protein; Parapoxvirus; immune response;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                55.6%; Score 5; DB 8; Length 378; 100.0%; Pred.                                                                                                    The invention relates to a method of enhancing an immune response to an antigen comprising administering to a mammal an amount of a B2L viral envelope protein of a Paraposvirus and an antigen. The B2L protein acts as an adjuvant to enhance the immune response to the antigen. The antigen comprising the antigen administered as an attenuated or killed pathogen comprising the antigen. The B2L protein and the antigen are administered sequentially or simultaneously as a fusion protein. The method and composition are useful in enhancing an immune response to an antigen such as a tumour antigen. The composition is useful in preventing and/or treating flu, tuberculosis, respiratory syncytial virus, anthrax and HIV. This sequence represents the D1701 B2L protein, used in the scope of the
treating flu, tuberculosis, respiratory syncytial virus, anthrax and HIV, by administering B2L viral envelope protein of a Parapox virus and an

             is a tumour antigen administered as an attenuated or killed pathogen comprising the antigen. The B2L protein and the antigen are administered sequentially or simultaneously as a fusion protein. The method and composition are useful in enhancing an immune response to an antigen as a tumour antigen. The composition is useful in preventing and/or treating flu, tuberculosis, respiratory syncytial virus, anthrax and HIV. This sequence represents the envelope antigen p37K, used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a method for enhancing a subject's immune response to an administered antigen and/or an active component of a waccing by administering an amount of a B2L viral envelope protein and an immunostimulatory protein PP30 of a Parapox virus. The method and composition of the invention is useful for enhancing an immune response to an antigen such as a tumour antigen. The invention is useful as an adjuvant for vaccine for preventing and/or treating flu, tuberculosis, respiratery syncytial virus, anthrax and human immunodeficiency virus (HIV). The invention is also useful in the preparation of vaccine. The present sequence is Parapox ovis B2L viral envelope protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immune response; B2L; viral envelope protein; immunostimulatory protein; PP30; tumour antigen; flu; tuberculosis; respiratory syncytial virus; anthrax; vaccine; immunostimulant; virucide; antitubercular;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a method for enhancing a subject's immune response to an administered antigen and/or an active component of a vaccine by administering an amount of a BZL viral envelope protein and an immunostimulatory protein PP30 of a Parapox virus. The method and composition of the invention is useful for enhancing an immune response to an antigen such as a tumour antigen. The invention is useful as an adjuvant for vaccine for preventing and/or treating flu, tuberculosis, respiratory syncytial virus, anthrax and human immunodeficiency virus (HIV). The invention is also useful in the preparation of vaccine. The present sequence is Parapox ovis BZL viral envelope protein.

A;Molecule type: DNA
A;Residues: 1-482 <HOF>
C;Residues: 1-482 <HOF>
C;Function:
C;Function: Catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
C;Superfamily: cyclomaltodextrin glucanotransferase/alpha-amylase; alpha-amylase core hock;Reywords: glycosidase; hydrolase; polysaccharide degradation
C;Keywords: glycosidase; hydrolase; polysaccharide degradation
F;194-319/Domain: alpha-amylase core homology <AMY>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cipate: 02-Mar-2001 #sequence_revision 02-Mar-2001 #text_change 09-Jul-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A, Description: nuclease
A, Note: the protein has both RNAse and DNAse activity
C, Superfamily: nuclease NUC!
C, Keywords: homodimer; hydrolase; membrane protein; mitochondrion
F;138/Active site: His #status predicted

A; Description: catalyzes conversion of indoleglycerol phosphate and serine to tryptophash A; Description: catalyzes conversion of indoleglycerol pathway; tryptophan biosynthesis
A; Note: cofactor pyridoxal phosphate; last step in pathway
C; Superfamily: tryptophan synthase beta chain; tryptophan synthase beta chain; tryptophan synthase beta chain; tryptophan synthase beta chain homology
C; Keywords: carbon-oxygen lyase; hydro-lyase; phosphoprotein; pyridoxal phosphate; tryptophan synthase beta chain homology cTRPB>
F; 35.3-397 Domain: tryptophan synthase beta chain homology cTRPB>
F; 96, Active site: His #status predicted
F; 97, Bainding site: pyridoxal phosphate (Lys) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    acid phosphatase (EC 3.1.3.2) precursor, phosphate-repressible - Penicillium chrysogenum C;Species: Penicillium chrysogenum

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     phytoene dehydrogenase (EC 1.3.-.-) - Rhodobacter capsulatus
N.Alternate names: phytoene desaturase
C;Species: Rhodobacter capsulatus
C;Species: Rhodobacter capsulatus
C;Accession: A32617; 804402
R;Bartley, G.E.; Scolnik, P.A.
